

Tips for Safe Cycling

◆ Intersections

Always be alert at intersections for traffic conflicts. Left turns by cyclists and right turns by motorists are the biggest problem confronting the cyclist..

◆ Parked Cars

Watch for parked cars pulling into traffic or entering the street from driveways and for doors opening on parked cars.

◆ Laws

Obey all traffic control devices, such as stop signs, traffic signals, one-way streets, etc., the same as a motor vehicle operator.

◆ Riding

Ride as near to the right side of the road as practicable. Don't show off by stunting or weaving in traffic

◆ Right-of-Way

Rules for right-of-way that apply to motor vehicles also apply to bikes. Always give pedestrians the right-of-way but don't argue with cars even when you are right.

◆ Visibility

Wear bright clothing when riding at dusk or dark and use a white light in front and a red reflector in the rear. Added reflective material on your clothing and bicycle is recommended when night riding is required. A flag would be useful on rural roads to increase visibility.

◆ Helmet Use

Most fatalities and serious injuries to cyclists are the result of head injuries. Always wear a Snell or ANSI approved helmet.
